

Chart Types Cheat Sheet

Interactive Infographic Generator · name any of these in the **Regenerate** box, e.g. "change the doughnut to a radar chart" or "add a heatmap of companies vs capabilities".

Native Chart.js types (1-13)

1. Doughnut

type: 'doughnut'

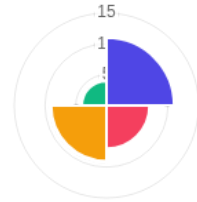

Parts of a whole (with a center hole)

2. Pie

type: 'pie'

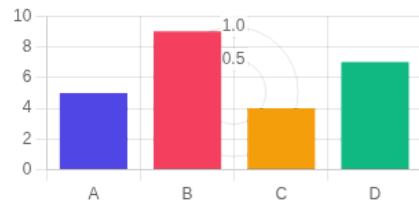

Parts of a whole (full circle)

3. Polar area

type: 'polarArea'

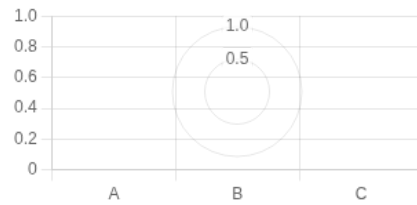

Parts of a whole where slices also vary in length

4. Bar (column)

type: 'bar'

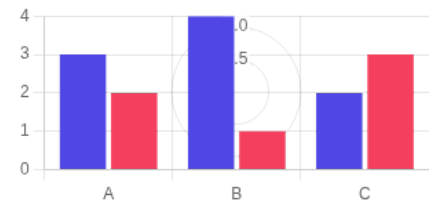

Comparing categories

5. Horizontal bar

type: 'bar', indexAxis: 'y'

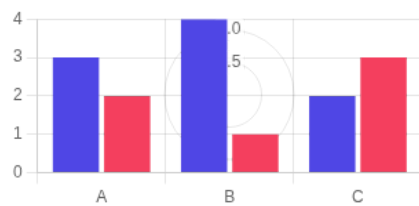

Comparing categories with long labels

6. Stacked bar

type: 'bar' + stacked scales

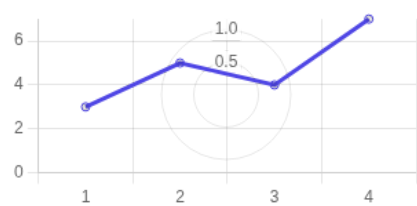

Composition within each category

7. Grouped bar

type: 'bar', multiple datasets

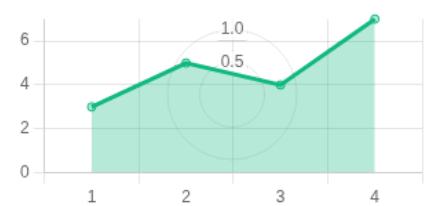

Several series side-by-side

8. Line

type: 'line'

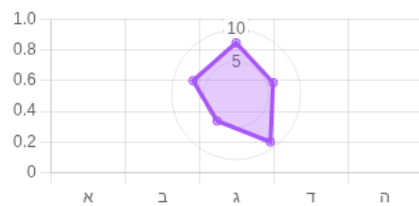

Trend over time

9. Area

type: 'line', fill: true

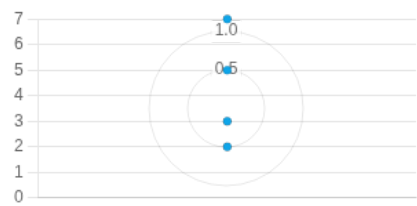

Trend over time, emphasizing volume

10. Radar

type: 'radar'

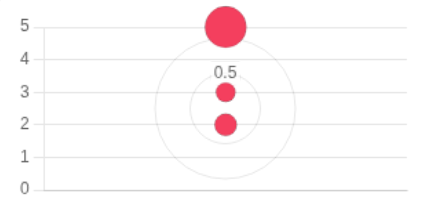

Profile across several dimensions

11. Scatter

type: 'scatter'

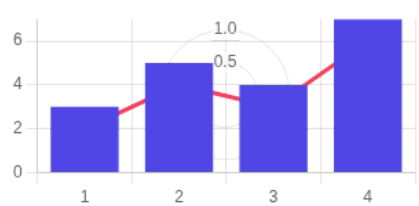

Correlation between two values

12. Bubble

type: 'bubble'

Correlation + a third value as size

13. Mixed (bar + line)

datasets with per-type

Combining two different series

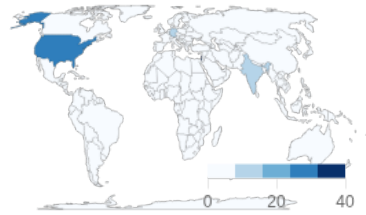

Offline plugin charts (14-16) · maps need per-country data *

14. Heatmap (matrix)

`IDG_CHARTS.heatmap(...)`

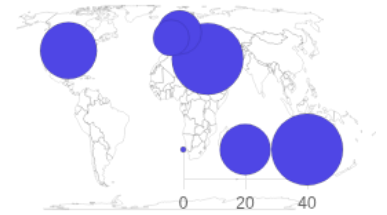

Intensity grid / capability matrix (X vs Y)

15. Choropleth map

`IDG_CHARTS.choropleth(...)`

Values shaded by country *

16. Bubble map

`IDG_CHARTS.bubbleMap(...)`

Values as sized circles on countries *

Tips: Charts are chosen by the model from your document; steer them with free-text feedback in any language. The **maps** (*) only render when your document has real per-country numbers — geographic data is never invented. Raise **Settings → Output → Max chart count** if you ask for more charts than the current cap.
